**What is covered:**

- Katadyn Base Camp Pro 10L
- Katadyn Gravity Camp 6L

**What Katadyn will do:**

- We will either repair or replace your Base Camp Pro 10L Water Filtration System.
- If your filter clogs or you are unhappy with its flow rate during the one-year warranty period, Katadyn will send you a replacement Ultra Flow Filter Cartridge free of charge.

**How long does the coverage last:**

- **2 YEAR LIMITED WARRANTY ON REMAINDER OF GRAVITY CAMP 6L OR BASE CAMP PRO 10L WATER FILTRATION SYSTEM**
- **ONE-YEAR FULL WARRANTY ON ULTRA FLOW FILTER CARTRIDGE**

**KATADYN PRODUCT REGISTRATION**

Please take a moment to register your new Katadyn product by completing the short product registration form online at www.katadyn.com/productregistration. The information you provide will help us in the event that you need to request warranty service.

**KATADYN Hiker Pro Replacement Cartridge Compatible**

**KATADYN Siphon Ceramic Microfilter Compatible**

**Camp Series Accessories**

**PRODUCT REGISTRATIONS & SPECIFICATIONS**

**PRODUCT WARRANTY**

Katadyn warrants your Ultra Flow Filter Cartridge to be free from defects that cause the filter to clog or to have reduced flow rate. Katadyn will either repair or replace your Gravity Camp 6L or Base Camp Pro 10L Water Filtration System, at Katadyn's discretion.

Including Katadyn, Optimus Stoves and AlpineAire Foods.
Thank you for choosing a Katadyn portable water microfiltration system. The Katadyn Gravity Camp 6L and Katadyn Base Camp Pro 10L were tested and found effective for removal of bacteria (including E.coli and Salmonella) and Cryptosporidium. These products are designed to be filled with water and suspended so that gravity does all the work.

**NORMAL OPERATION**

1.) Install Filter Protector (pre-assembled)

The Filter Protector is a cleanable screen that covers the Ultra Flow Filter Cartridge. A frequent cleaning is not required; however, using the Filter Protector will extend the life of your cartridge. The Protector can be used continually or when source water contains suspended particulates or dirt.

Step 1: Wrap protector sheet around cartridge (there will be approximately a 2” overlap)

Step 2: Connect Protector to bag (Figure 1)

2.) Install Filter

Screw cartridge clockwise inside cap as far as it will go. Do not grasp the cartridge around the pleated surface, since it may damage the filter.

3.) Fill Bag with Water

The Camp Microfilters require minimal set up. For best results, try out the products before first use and familiarize yourself with their operation.

4.) Flush System (Important!)

Before first use, flush system by running approximately 2 liters of water through the unit to remove harmless particles and dust. See following section on Normal Operation on how to filter water.

5.) Replace Cartridge Capacity & Replacement

Replacement cartridges (Ultra Flow Filter Cartridge) are available from the dealer where you purchased the product. To extend cartridge life, always use the best available water source along with the Filter Protector. Replacement Cartridge Installation:

1.) Remove output hose and unscrew cap. Screw the cartridge counterclockwise to remove. Do not grasp the cartridge around the pleated surface, since it may damage the filter.

2.) Insert new cartridge as described in Product Set-up step 2 (See Figure 2).

3.) Place new filter into bag (Figure 2)

4.) Close bag by folding ends. (Figure 3) Dry bag and outlet connector with clean cloth.

5.) Store all dry components inside the carry bag.

**FIELD PERFORMANCE TIPS**

1.) Check Outlet Hose: Ensure outlet hose valve clamp is in the wide open position, not pinching the hose whatsoever. Ensure outlet hose quick connect is securely connected to the quick connect on the cap or filter. Hang bag and allow the entire amount of solution to run through cartridge (into sink or container) to disinfect filter, hoses, bag, etc.

2.) If System Leaks Near the Cap

Ensure cap is seated properly and the O-ring is not damaged. If still in place and not damaged. If not replace it (Figure 5).

3.) Clogged Outlet Valve

Unscrew cap counterclockwise from the bag. Then screw the filter counterclockwise out of the bag. If the outlet hose is clogged flush out the filter and replace the cartridge. If flow is not restored to desired level, replace cartridge with new one. If water flow into the output hose) Open hose valve clamp to begin water flow. Close hose valve clamp to stop water flow. If replacement is unavailable, flush the system with the first liter of treated water when you start filtering water again.

4.) WARNING

Improper threading of filter cartridge to cap could cause fluid leakage and result in illness. Follow instructions for threading the cap and cartridge. Improper storage to completely disinfect hoses and filter before use. If filter is damaged or contaminated, do not use.

5.) On/Off Valve Cap with Quick Disconnect Filter

Check On/Off Valve Cap with Quick Disconnect Filter. If not available use 4 tablespoons of ordinary household bleach.

Rinse the inside of water bag with clear water (non-filtered water is ok). Discard water.

WARNING

Water from running down bag/hose and into your water container. Improper use of filter can lead to contamination and death. Please follow all of the instructions in this manual.
